

# **Vision Statement**

## **UniFCR**

The problem of	University attendance list where students have to sign in the list for making their attendance. As it is a paper form of attendance it is ineffective
affects	The University Professor and the students
The impact of which	Students might end up getting bad grades and Professor's lack of Motivation
A successful solution would be	A Facial Recognition Software that detects and recognises all the students attending the lecture.

## **Product Statement**

For	University Officials, Professors
Who	Wants to have a clear statistics about the university attendance
UniFCR System	Is a Windows platform System
That	Lets the Officials to enter students in the system once. Once the system knows the the students it will recognise the student and counts the attendance.
Unlike	The paper form of attendance where lists can be lost or the student makes false signature for other fellow students
Our product	Keeps an attendance statistics of the students. Furthermore the system connects to the University Database to train the faces automatically.
